Flu vaccination consent form

Dear Parent or Guardian

School Based Influenza Nasal Spray Vaccination Programme 2022-2023

The Influenza nasal spray vaccination is offered annually as part of the national programme for vaccination of children and young people. This academic year the vaccine will be offered to children in all year groups from Reception through to Year 9.

The nasal spray flu vaccine is safe and effective in helping to protect children against flu.

Flu is caused by the influenza virus, which children can catch and spread easily. It can be a very unpleasant illness for children, which can lead to serious problems, such as bronchitis and pneumonia. Vaccinating them also protects others who are vulnerable to flu, such as babies and older people.

The vaccination is given as a simple, quick and painless spray into each nostril.

Contained within this letter are some frequently asked questions and useful information about the vaccine, and the virus it protects against.

Further information is also available on the NHS Choices website www.nhs.uk.

Please take this opportunity to check that your child's routine vaccinations are up to date. You can check this with your GP Practice. If you have any questions, you can also contact the Immunisation Service or your School Nurse.

How do I give consent for this vaccination?

If you have already submitted a consent form for your child from 1st September 2022, and they are in Year 7 to Year 9, you will need to submit another consent form in order to give your consent for your child to have the Influenza nasal spray vaccination. Please follow the steps below to complete a consent form:

Your online consent form closes at 11am 4 working days before your session date, which can be found in the accompanying email from your child's school.

1. Click on the following link or scan the QR code above: www.susseximmunisations.co.uk/Forms/Flu
2. Enter and confirm your preferred email address – *you will receive a confirmation email following submission of the consent form.*
3. Enter your school code and click 'Find School': *School codes are unique to each school and site. Use the code found on this letter, to avoid delays with vaccination: **SX138895***
4. Check the school name matches the school your child attends **Bexhill High Academy**
5. Complete and submit the consent form, indicating your choice of consent - *Please ensure you provide the child's registered address and GP.*

If you are unable to complete the online form, do not want your child to have this vaccination, or wish to change your consent, please read the frequently asked questions for how to proceed.

We hope that the information provided helps you to make a positive decision about protecting your child and the wider population against this virus, for which vaccinations are readily available.

Yours sincerely

Immunisation Clinical Service Manager

FREQUENTLY ASKED QUESTIONS

What do I do if I cannot complete the online consent form? Contact your local team in the Immunisation Service on the number provided, and complete a verbal consent with them, **before the closing date and time**.

What do I do if I missed the cut off date and the form is closed? The online form will re-open, 1 working day after the school session date. You will then be able to complete a consent form and book into a catch up clinic online, by following the instructions in the automated email you will receive upon submission of a positive consent form. If you are unable to use the online booking system, please contact your local team on the number provided.

What do I do if I do not want my child to have this vaccination? Please complete the online consent form following the steps in the parent letter and indicating that you do not give consent for this vaccination.

What do I do if I have changed my mind after completing an online consent form? You must contact the Immunisation Service to change your consent and inform your child's school, by putting this in writing, prior to the vaccination session date.

How will I know when my child has been vaccinated? You will receive an email, sent to the address provided when completing the online form, advising you of the vaccination outcome. If your child was not vaccinated, following submission of a positive consent form, your email will advise of the reason for this and contain details of how to book into a catch up clinic.

What vaccine is being offered and why? The Fluenz Tetra nasal spray is the vaccine currently used for the children's routine Influenza vaccination programme. It offers protection against four strains of the Influenza virus which are anticipated to be circulating in the UK this winter. The virus in the vaccine is live, but it has been weakened so that it cannot cause the illness in healthy people. It can reduce the circulation of Influenza and can protect the wider community, particularly those for whom Influenza poses a serious health risk.

To read the vaccine Patient Information Leaflet visit: <https://www.medicines.org.uk/emc/product/3296/pi>

What is Influenza? Influenza is an unpleasant illness causing fever, stuffy nose, dry cough, sore throat, aching muscles and joints, and extreme tiredness. This can last several days and may need hospital treatment. Serious complications include a painful ear infection, bronchitis, and pneumonia. The Influenza season in the UK is from autumn through to spring.

Is the vaccine safe? - The vaccine has undergone rigorous safety testing before being licensed for use in the UK. It is a well-established vaccine with a good safety profile, and like all other vaccines unwanted reactions are constantly monitored.

Shedding. What do I need to know? The amount of virus shed after vaccination is normally below the levels needed to pass on the infection to others and it does not survive for long outside of the body. Unvaccinated children are not at risk of catching flu from the vaccine either through being in the same room where flu vaccine has been given or by being in individual contact with recently vaccinated children. This is in contrast to natural flu infection, which spreads easily during the flu season.

There is a very small percentage of children who are extremely immunocompromised (for example following a bone marrow transplant). These children are normally advised not to attend school due to the much higher risk of being in contact with other infections, including seasonal Influenza.

Children who have been vaccinated with the nasal spray should avoid household contact with people with very severely weakened immune systems for around two weeks following vaccination (for example those who are receiving chemotherapy).

Are there any side effects of the vaccine? Children may develop a runny or blocked nose, headache, tiredness and reduced appetite, lasting a few days. The vaccine is absorbed quickly so, even if your child sneezes immediately after having had it, there's no need to worry that it hasn't worked. Any other side effects are unusual. If you're worried about any reaction you can call the NHS 111 service.

Children should not have the nasal vaccine if they:

- Are currently wheezy or have been wheezy in the past three days (vaccination should be delayed until at least three days after the wheezing has stopped).
- Are severely asthmatic, i.e., being treated with oral steroids or high dose inhaled steroids.
- Have a condition that severely weakens their immune system or have someone in their household who needs isolation.
- Have had severe anaphylaxis to egg allergy requiring intensive care treatment.
- Have had severe anaphylaxis to any other components of the vaccine – check the Patient Information Leaflet.

My child had the Influenza vaccination last year. Do they need another one this year? Yes. The Influenza vaccine for each season has the current four strains of Influenza, these may be different from last year. The World Health Organisation recommends annual vaccination.

Does the nasal vaccine contain gelatine derived from pigs (porcine gelatine)? Yes. The vaccine does contain a highly processed form of porcine gelatine, to keep it stable and effective. There is no porcine free alternative available for children in the non 'at risk categories. The World Health Organisation and the Islamic Organisation for Medical Sciences advised gelatine derived from impure animals for use in medicines has been sufficiently transformed so as to make its consumption permissible.

What if my child only has the vaccine in one nostril? A spray in each nostril is to maximize contact with the cells in the nose. A single spray will induce a sufficient immune response to protect your child.

What does consenting to SCFT staff to be able to view my child's Digital Health Record mean? It enables any SCFT Children's Services staff, who provide care for your child, to see information which has been shared out from the GP and other health organisations records if they use compatible systems. We cannot view other organisations records without consent, except in exceptional circumstances. Access to your child's health record helps our services to make safe clinical decisions on the most appropriate treatment and care.
